

## **STATUS OF WATER QUALITY REPORTS (October 2005 – January 2006)**

Construction activities on the Skyway Contract requiring water quality monitoring were completed in September 2005. As a result, a monthly report for this contract is no longer needed.

Water quality monitoring for the E2/T1 Marine Foundations for the Self-Anchored Suspension Span Contract began in October 2004. The contract was subsequently delayed due to funding and design issues. Field work resumed in January 2006 with the first water quality monitoring being required in late February.

As a result of the items discussed above, water quality reports were not produced during the period from October 2005 –January 2006.
